

## Baling Presses **Arno®Press**

### **Arno®Press**

Best results through efficiency and reliability. Arno®Press Baling Presses compact stamping press waste, such as steel, brass, copper and aluminium plates.

# Arno®Press

Baling presses are available in 2 different variants, depending on requirements.

The main field of operation for this press series is the automotive industry and industrial stamping press lines with high waste volume.

All parts of the presses coming into contact with scrap are lined with high-strength Hardox® wear plates with a special wave-shaped profile. The solid welded construction design means that the machines can also be used for heavy continuous operation. All presses have a graphic operator panel with visualisation of all process steps and can therefore be integrated easily into existing production lines and can be maintained via modem.

## APPLICATION

- Aluminium sheet
- Steel sheet
- Copper
- Brass
- etc.

## BENEFITS

- Reduced storage costs
- Reduced transportation costs
- Better melting results

## DATA

- Arno®Press K

Bale size: 300x300 - 400x600 mm

Power: 37-220 kW

- Arno®Press D

Bale size: 400x300 - 600x600 mm

Power: 22-220 kW
